

Assignment:

Create a web application which displays weather information about 5 cities:

1. Navi Mumbai
2. Bangalore
3. London
4. New York
5. Sydney

Use Auth0 to authenticate the user.

Once User is Authenticated form Auth0, display the Home Page:

HOME PAGE

Welcome {Email}

City
Navi Mumbai
Bangalore
London
New York
Sydney

Logout

CITY PAGE

{CITY NAME}

Temperature	{Current Temp}
Humidity	{Current Humidity}
Wind	{Current Wind}
Rain	{Current Rain}
Time	{Timestamp}
Date	{Today's Date}

Home | Logout

You can use any weather API you want.

One of the options is <http://www.openmeteo.com/doc/api>

Auth0: <https://auth0.com/docs>

Bonus Points:

- You can make aesthetically better looking UI
- Display First Name of User (instead of email)
